

## **BECK Architects, p.c.**

**Architecture, Planning, Interiors**

**For Immediate Release**

**Date: December 16, 2008**

### **Local Architect's Home Featured in *From House to Home* Magazine**

Architect Thomas Beck is known locally and regionally for his expertise in renewable energy and “high performance” homes, and for the optimal example of that expertise – his personal “off the grid” home. That home, which is powered by solar photovoltaic and wind energy, is the cover story for the December/January issue of *From House to Home* Magazine. The article spotlights the home’s self-sufficient energy systems as well as some of the reclaimed, environmentally friendly materials used in its construction. Numerous photos convey the application of both the science and the art that influenced the design of this unique Estes Park icon, and illustrate that a home can be both highly efficient and beautifully livable at the same time.
